THE ROCK

RixFlix limited series prompts — Episodes 1–3

A cumulative prompt packet for episode generation with recurring character continuity locked across episodes.

Episode 1 — The Dust Chamber

Open: Open on a black screen with elegant cinematic white text: A RixFlix Series Event

Create a prestige streaming-series episode/trailer sequence for Episode 1 of THE ROCK, a flagship RixFlix limited series. This episode adapts Chapter 1, “The Dust Chamber.” Tone: intelligent, ominous, grounded, cinematic, atmospheric, plausible science, slow-burn dread. Think Sphere, Arrival, Chernobyl, and Interstellar energy blended into a modern prestige thriller. Photorealistic only. No camp, no pulp, no cheesy aliens, no visible spacecraft interior.

Series continuity — preserve exact recurring character likenesses across all shots and future episodes:

Continuity rule: all recurring characters must retain the same face, body type, age, hair, and wardrobe identity across scenes and across future episodes of the series. No redesigns, no actor drift, no facial changes.

Story focus: a government-funded subsurface survey team arrives at Uluru / Ayers Rock in remote Australia to investigate strange underground readings. At first this is a high-level archaeological and geological operation. As the episode unfolds, the instruments reveal an impossible hollow zone deep inside the rock that behaves unlike any natural formation on Earth. The team performs a cautious drill validation. A probe reaches open darkness and briefly illuminates a smooth, artificial-looking surface hidden inside the void. When the probe touches it, power dies across the camp, the wind surges, the earth trembles, and a rotating storm forms over Uluru.

Visual flow: predawn blue desert, unmarked trucks arriving, floodlit camp at the base of Uluru, cables, generators, radar arrays, geophones, laptops, field tents, helicopters landing in red dust, scientists studying anomaly maps, worried faces, rotating 3D subsurface scans, arguments over whether the data is real, heat rising after dawn, drill rig operating, gray metallic dust in sample trays, downhole camera descending into darkness, first glimpse of the smooth hidden surface, sudden system blackout, violent gusts, red dust storm, subtle ground tremors, dark spiral storm tightening above the summit.

Audio: silence under the title card, then low desert wind, generator hum, radio chatter, muted strings, deep synth pulses, distant thunder, sudden silence after probe contact, then one massive low-frequency impact.

End beat: Dr. Mara Vance staring up at Uluru as dust cascades off the rock face and the storm turns overhead, realizing they did not find a chamber — they found a door.

Episode 2 — The Silent Geometry

Open: Open on a black screen with elegant cinematic white text: A RixFlix Series Event

Create a prestige streaming-series episode/trailer sequence for Episode 2 of THE ROCK, a flagship RixFlix limited series. This episode adapts Chapter 2, “The Silent Geometry.” Tone: grounded, cerebral, ominous, slow-burn dread, realistic science-thriller. Visual style should feel like Arrival + Chernobyl + Interstellar + Sphere, but as a modern prestige series. Photorealistic only. No camp. No visible aliens. No cheesy sci-fi glow overload.

Series continuity — preserve exact recurring character likenesses across all shots and future episodes:

Continuity rule: all recurring characters must retain the same face, body type, age, hair, and wardrobe identity across scenes and across future episodes of the series. No redesigns, no actor drift, no facial changes.

Story focus: continue immediately after the drill contact. Dead monitors flicker back on, generators cough to life, red dust circles the drill platform, and an unnatural spiral storm rotates above Uluru. The team studies corrupted data, seismic traces, electromagnetic spikes, and rotating tomography scans. Uncle Jarra arrives with unsettling calm and leads Mara and Whitlock to faint geometric grooves on the outer skin of Uluru. A full tomography sweep reveals enormous internal decks, shafts, compartments, and nested access seams hidden inside the body of the rock. Keep Uluru intact externally. No full spacecraft reveal yet. Let the horror come from implication, scale, and precision.

Visual flow: command-trailer scenes with glitching screens and waveform anomalies, field arguments under rising storm light, Uncle Jarra studying the rock, close-up photography of faint grooves on stone, scans resolving impossible internal geometry, broad stepped planes, shafts, nested seams, the phrase “it’s a hatch” almost spoken, then exterior transformation as huge dark geometric bands surface across Uluru’s face as if the mountain is remembering itself.

Audio: low drones, desert wind, radio chatter, restrained strings, deep bass pulses, subtle thunder, sudden silence beats.

End beat: Mara staring up at the geometric bands surfacing across Uluru, understanding this is not a chamber, not a tomb, but a vessel. Final line: “Now we find out what it was built for.”

Episode 3 — A Failing World

Open: Open on a black screen with elegant cinematic white text: A RixFlix Series Event

Create a prestige streaming-series episode/trailer sequence for Episode 3 of THE ROCK, a flagship RixFlix limited series. This episode adapts Chapter 3, “A Failing World.” Tone: cerebral, ominous, expansive, emotionally restrained, high-stakes global science thriller. Photorealistic only. No camp. Keep everything grounded, procedural, and plausible. This episode should widen the story from a single impossible discovery to a civilization-scale emergency.

Series continuity — preserve exact recurring character likenesses across all shots and future episodes:

Continuity rule: all recurring characters must retain the same face, body type, age, hair, and wardrobe identity across scenes and across future episodes of the series. No redesigns, no actor drift, no facial changes.

Story focus: the team realizes the buried vessel may be connected to a dying planet. Begin with emergency calls between Canberra and Washington while the storm over Uluru persists and compasses drift. Introduce Dr. Luis Ortega arriving with global collapse models. Show world feeds of heat domes, grid failures, oceanic die-off, methane plumes, failing satellites, crop panic, and emergency briefings. Keep these glimpses brief, elegant, and believable — not disaster-movie excess. Intercut the global crisis with the command trailer at Uluru, where the team overlays climate data with the hidden structure’s scans and begins to suspect the buried object was designed for planetary emergency.

Visual flow: bronze wrong-looking evening light over Uluru, drifting compass needles, secure phones, intelligence briefings, world maps with cascading red indicators, satellite icons blinking out, Ortega presenting synchronized systems-failure curves, close-ups of Mara, Whitlock, and Barr processing the implications, Uncle Jarra on the ridge speaking about warnings remembered in pieces, geometric lines on Uluru converging toward a point near the drill site, then the tomography model changing in real time as two interior transit corridors open inside the vessel.

Keep Uluru intact externally. No full ship reveal. The suspense comes from systems, timing, and preparation.

Audio: subdued pulse, low strings, distant thunder, quiet radio chatter, occasional hard cuts to silence, one deep bass note when the interior corridors open. The episode should feel like the world inhaling before catastrophe.

End beat: Mara staring at the live model as internal corridors open inside the vessel for the first time in human history. Final line: “It isn’t waking because we found it. It’s waking because the world is ready.”
